RESEARCH PROJECTS

Philosophy of academic work

The university professor is an important stage in the academic life in which the student's future details are determined. It puts the final touches in educating generations, which in turn creates movement in all fields of the labor market. Therefore, these touches must have been placed with an extreme degree of precision and mastery. This is for what follows it to indicate it. The professional engineer indicates, directly or indirectly, that the one who made him has tools and abilities that surpass that engineer, and similarly to that teacher and doctor. However, it is necessary for the university professor to be constantly updated with everything new in his professional field, and this cannot be achieved except through authentic scientific research. His commitment to creating research that has an impact on his students and his community achieves the goal of being informed of everything new, through which he can build an intellectual base that helps him in Active community participation and finding opportunities to raise the level of his organization and community.

- **Publishing a paper titled:** " The impact of augmented reality technology on the motivation of fifth grade students towards the information technology course book in the Sultanate of Oman". At The Egyptian Association for Science Education, Volume 26, Issue 4, October 2023, Pages 120-150, Print ISSN (2536-9148).
